Report
on learning practice № 2
Analysis of multivariate random variables

Performed by
Aleksandr Shirokov
J4133c

St. Petersburg
2021

Contents

1	Lab 2	2
1.1	Plotting a non-parametric estimation of PDF in form of a histogram and kernel density function for MRV (or probability law in case of discrete MRV).	2
1.2	Estimation of multivariate mathematical expectation and variance.	2
1.3	Non-parametric estimation of conditional distributions, mathematical expectations and variances.	2
1.4	Estimation of pair correlation coefficients, confidence intervals for them and significance levels.	2
1.5	Task formulation for regression, multivariate correlation.	2
1.6	Regression model, multicollinearity and regularization (if needed).	2
1.7	Quality analysis.	2
2	Source code	2

1 Lab 2

- 1.1 Plotting a non-parametric estimation of PDF in form of a histogram and kernel density function for MRV (or probability law in case of discrete MRV).
- 1.2 Estimation of multivariate mathematical expectation and variance.
- 1.3 Non-parametric estimation of conditional distributions, mathematical expectations and variances.
- 1.4 Estimation of pair correlation coefficients, confidence intervals for them and significance levels.
- 1.5 Task formulation for regression, multivariate correlation.
- 1.6 Regression model, multicollinearity and regularization (if needed).
- 1.7 Quality analysis.
